## TECHNICAL DATA SHEET

### AGVISCO-S30

### VISCOSITY REDUCER

#### Product Description

AGvisco-S30 is a specialty chemical, formulated to reduce the viscosity of massecuite during the boiling and crystallization process. The addition of AGvisco-S30 helps to increase the deposition of sugar crystals by reducing the viscosity (which prevents the deposition of sugar crystals).

#### Benefits

- ✓ Helps to increase the circulation of massecuite by reducing the viscosity
- ✓ Helps to increase the deposition of sugar crystals
- ✓ Reduce ash content
- ✓ Lubricates the crystals effectively

#### Specification

pH	6.0-8.0
Specific gravity	1.0±0.1
Appearance	Colorless/hazy liquid

#### Dosage

Dosage will depend on the type and size of pan. Recommended dosage is 9-13g/MT batch.

#### Handling and Storage

Use gloves, goggles and other safety measures. Keep the container always closed. Do not keep under direct sunlight. Store away from volatile and reactive chemicals.

See the MSDS for further details

#### Packing

AG visco-S30 Available in 20litre, 30litre, and 210litre HDPE drums.
