AQUA AG-340

CORROSION INHIBITOR FOR COOLING TOWERS

Product Description

Aqua AG-340 is specially designed corrosion inhibitor for cooling towers. Aqua AG-340 is a synergetic blend contains zinc and dispersing agents. The dispersing agents help to remain the Zinc in solution even at high pH. The dispersing agent also keeps the suspended particles in solution.

Application

- Contains scale inhibitor
- Provides cathodic protection
- Keeps suspended solids in solution and prevents settling
- Stable at high pH

Dosage

Dosage will vary depends on the parameters and water quality. Our technical representative can give required dosage.

Specification

appearance	Colorless liquid
pH(1% solution)	2.5-3.5
Specific gravity	1.10-1.20

Handling and storage

Store in a cool dry place at normal storage condition. Avoid contact with direct skin. Keep away from direct sunlight. Use gloves, goggles while handling. Keep the container closed when not in use. Recommended shelf life is 2 years from the date of manufacturing.

Refer MSDS for more details.

Packing

Aqua AG-340 available in 30 liter, 200 liter HDPE drums.
